A. Single Dynamic ANN — Kronecker Input-Gated Monolithic Architecture

One shared MLPRegressor weight matrix | Dynamically selected topology (256, 128, 64) (tanh) | Cosine Adam + L-BFGS Polish

B. Split Dynamic ANN — Output-Gated Mixture-of-Experts (Branched) Architecture

Decoupled expert trunks tuned independently per robot | Multiplicative Output Gate: $\hat{q} = is_scara \cdot f_S(\varphi) + is_ned \cdot f_N(\varphi)$
